

Keeping it clean: Dörner's AquaPruf 7400 Ultimate Conveyor Series incorporates new engineering designs for proper sanitation and fast cleaning. Suitable for food handling, pharmaceutical and clean room environments as well as other industries where sanitation and cleanliness are critical, the 7400 Ultimate washes down quickly to keep products moving.

These conveyors feature solid stainless steel rounded cross-members with no hollow tubes where bacteria could grow. Likewise, threadless stainless steel support stand feet eliminate points where dangerous bacteria could dwell.

The conveyors can take high-pressure washings using water, soap, bleach, chlorine, alcohol or foaming chlorine cleaner without the risk of corroding bearings or other important components. (Dörner Manufacturing, (800) 397-8664, www.dorner.com)

Fit to print: Compact industrial bar-code and label printers are now available from Cognitive Solutions. The company says its new C Series high-performance thermal label printers bridge the gap between mid-range and desktop printers.

The C Series printers feature a rugged and reliable all-metal mechanism that prints up to 10,000 labels per day. The units have print speeds of 6 and 8 inches per second and 16 MB of memory. A menu-driven LCD control allows for easy setup without a computer.

Other features of the C Series printers include a 32-bit 200 MIPS processor for fast throughput, a large roll capacity for high-volume applications and continuous printing, a clock, internal Ethernet for a complete connectivity suite including serial/parallel and USB ports, and a two-year warranty. (Cognitive, (800) 451-9874, www.cognitive.com)

Pump it up: Jungheinrich Lift Truck Corp. offers a new hand pallet truck designed for all tasks involving manual transportation of goods over short distances. The AM 2200 pallet truck is rated for a maximum load capacity of 5,500 pounds. A tiller handle allows for effortless and safe maneuvering of the load by either right- or left-handed operators—even with just one hand on the tiller.

The truck's hydraulic system allow operators to pump a pallet off the ground with only three strokes of the unit's differentiator mechanism, while just five strokes will take the load to the truck's maximum lift height of 4.8 inches. A precision valve provides a gentle lowering and precise set-down of the load. Ball-bearing wheels and Teflon-coated joints make the unit's motion smooth, quiet and effortless.

In addition, the steering wheels feature an aluminum hub with bearing cap. Options include a range of fork lengths and fork-spacing widths, various braking systems, a choice of wheel materials and special paint. (Jungheinrich Lift Truck Corp., (888) 333-2644, www.jungheinrich-us.com)

better storage buildings

warehousing, climate control and bulk storage

Rubb offers proven, time tested solutions for a wide range of warehouse requirements. Our large clear spans and high translucent ceilings provide a bright, efficient working environment. Rubb buildings are built to last yet are fully relocatable or extendable to meet changing needs.

- Proven Durability & High Quality Materials
- Bright, Efficient Space • Low Life Cycle Cost
- Superior Corrosion Protection • Superior Fire Performance
- Completely Relocatable • Modular Design Flexibility
- World Class Customer Service
- Steel/Fabric Hybrid Designs • Crane Lifiable

We Cover The World.®
